- Redesign overall application architecture to fixing existing bugs and issues. All backend servers are on cloud(AWS: EC2, Elasticbeanstalk, ElastiCache-Redis, DynamoDB, MongoDB).
- Designing, creating, bugs fixing, testing, deploying and enhance backend API, Admin module and Socket module. Codes write in Node.js
- Manage and setup databases for the application(MongoDB and DynamoDB)

Skill

Programming:

C#	Expert
PHP	Expert
Node.js	Expert
HTML	Expert
CSS	Advanced
Javascript	Expert
C++	Intermediate
Python	Beginner
Java	Advanced

Database:

MongoDB	Advanced
Mysql	Expert
Sql Server	Expert
Oracle	Advanced
DynamoDB	Intermediate

Cloud:

AWS-EC2	Expert
AWS-ElasticBeanstalk	Expert
AWS-RDS	Expert
AWS-DynamoDB	Beginner

- Migrating certain data from MongoDB to DynamoDB. Creating a tools for this migration.
- Creating application to mimic users behaviour to testing. Currently API have to handle 10K concurrent user per game session.
- Within 2 days joining this project, i able to resolve user not receive question issue(since this is quiz based application, receiving question is important).
- In 2 weeks i manage to make socket/websocket servers able to horizontal scaling (auto-scaling).
- Manage to resolve more than 10K concurrent users calling single API (collecting answer API) issue, previously if to many users API will facing response timeout at front-end.
- Lead and coaching junior developer in backend development.
- Build using Node.js (PUG for UI) for backend API and Dashboard.
- C#.Net and React Js for various tools.

AWS-Lambda Intermediate

LANGUAGE

Malay Excellent

English Good

2. PicHere(2016-2018).

Picture sharing base Social Media Network on Map.

My tasks:-

- Responsible to set up entire system architecture for backend. All related servers are on cloud(AWS: EC2, S3, SNS, RDS-Mysql, Firebase, Google Cloud API)
- Designing, creating, bugs fixing, enhancing, deploying and testing backend API. API was REST writing in PHP.
- Creating a base module for front-end. The module was for uploading image to server(Android).
- Design and manage database(Mysql, Firebase).
- Lead team of developers for this project.
- Build using PHP(Slimframework), Node.js and Python

SAFA Integrated Sdn. Bhd. / Technical Consultant

DECEMBER 2015 - OCTOBER 2016, BANGI, SELANGOR

Project:

1. KTMB KOMUTER AUTOMATIC FARE COLLECTION SYSTEM(2015-2016).

Desktop and web applications for Komuter ticketing system.

My tasks:

- Responsible to designing, creating, bug fixing, enhancing and testing applications.
